In response to applicant's amendment dated January 04, 2007. The following action is taken:

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims are rejected under 35 U.S.C. 102(b) as being anticipated by Weirauch et al (6339210).

The reference shows an optical disk having an inherent address and data sectors. The reference also shows a control block 300 comprises an identifier 302 within a first control area 302, a second control area 304 wherein the first control area having at least one bit having a control action specified by the first area as shown by the action 308, 310, 312, ...etc.

With respect to the limitations of claims 2, 4, and 6. The use of ECC and within the data sectors is an inherent feature of an optical disk.

With respect to the limitations of claims 9-19. The claims merely read on "data" within the control field as shown by figs 3 and 5.

Applicant's arguments with respect to claims 1-19 have been considered but are moot in view of the new ground(s) of rejection.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. 7082092.
